II.	RESPECT FOR BIODIVERSITY	2
III.	WATER AND WASTE IMPACT	2
IV.	ALLOCATED RESOURCES	3

INTRODUCTION

As set out in our Articles of Association, “Famille Ravoire intends to generate a positive and significant social, societal and environmental impact in the conduct of its activities. As part of this approach, the President undertakes to take into consideration (i) the social, societal and environmental consequences of their decisions for all of the Company’s stakeholders, and (ii) the consequences of their decisions for the environment.”

We are aware that our activities have an impact on the environment, and we are committed to understanding and then reducing these impacts by adopting more sustainable practices throughout our value chain.

I. CARBON FOOTPRINT ASSESSMENT

Commitment

Measure our corporate carbon footprint in order to support the global ambition of limiting global warming to 1.5°C, as defined in the Paris Agreement.

We calculated our first carbon footprint assessment for 2021. Through this initial exercise, we learned that the majority (53%) of our emissions are linked to the wine contained in the bottles. Our second-largest source of emissions is packaging, particularly glass (33%).

Over five years, our value chain has evolved considerably, and we have been able to test new initiatives such as bottle reuse.

We are committed to recalculating our carbon footprint no later than May 2027. The objective is to identify our new impacts and assess the results of the first actions undertaken.

Examples include:

- Since 2022, the Maison Ravoire range has used bottles suitable for reuse. This has involved several changes, including the adoption of a bottle compatible with washing.
- Since 2022, at our Salon-de-Provence site, customers have been able to return deposit bottles easily in exchange for a €1 voucher for our online shop.
- We are committed to sharing good practices within the sector, notably by providing concrete feedback from our experience.

II. RESPECT FOR BIODIVERSITY

Famille Ravoire understands and recognises the importance of biodiversity, both for the health of men and women and for the essential survival of vines, which is inseparable from wine production.

Our ambition is to:

1) Measure our dependence on and our footprint on biodiversity by December 2027. This includes the external stakeholders involved, such as winegrowers.
2) Support two projects aimed at restoring damaged ecosystems by June 2028.

These projects will be developed in close collaboration with our partner winegrowers.

III. WATER AND WASTE IMPACT

Impact on water

Famille Ravoire believes it is important to preserve water resources for future generations. In order to reduce its impact on water, Famille Ravoire has set the following objectives:

1) Audit its own water consumption before July 2027.
2) Verify the proper water treatment cycle throughout the production stages before July 2027. This includes the external stakeholders involved.

Impact on waste

Famille Ravoire follows the “3Rs” approach: Reduce, Reuse and Recycle. In terms of waste reduction:

- Raise awareness among 100% of employees about waste reduction once a year from 2026 onwards.
- Reduce packaging components that interfere with waste sorting before December 2027.

IV. ALLOCATED RESOURCES

To ensure the implementation of our environmental roadmap, Famille Ravoire has entrusted a dedicated team with monitoring its climate strategy. This team is composed of an external CSR consultant and the Marketing and Development Director.

The latter is also a member of the Executive Committee, ensuring strategic oversight at the highest level and that environmental issues are taken into account in corporate decisions.

This roadmap is updated, presented and approved by the Executive Committee every two years (24 months). This is the company's highest governing body.
